Report No. 13-00026-293

# Community Based Outpatient Clinic Reviews at VA Central California Health Care System Fresno, CA

August 21, 2013

Washington, DC 20420

# Why We Did This Review

The VA OIG is undertaking a systematic review of the VHA's CBOCs to assess whether CBOCs are operated in a manner that provides veterans with consistent, safe, high-quality health care.

The Veterans' Health Care Eligibility Reform Act of 1996 was enacted to equip VA with ways to provide veterans with medically needed care in a more equitable and cost-effective manner. As a result, VHA expanded the Ambulatory and Primary Care Services to include CBOCs located throughout the United States. CBOCs were established to provide more convenient access to care for currently enrolled users and to improve access opportunities within existing resources for eligible veterans not currently served.

Veterans are required to receive one standard of care at all VHA health care facilities. Care at CBOCs needs to be consistent, safe, and of high quality, regardless of model (VA-staffed or contract). CBOCs are expected to comply with all relevant VA policies and procedures, including those related to quality, patient safety, and performance.

## **Executive Summary**

**Purpose:** We evaluated select activities to assess whether the CBOCs operated in a manner that provides veterans with consistent, safe, high-quality health care.

We conducted an onsite inspection of the Tulare CBOC during the week of June 17, 2013.

The review covered the following topic areas:

- WH
- Vaccinations
- C&P
- EOC
- EM

For the WH and vaccinations topics, EHR reviews were performed for patients who were randomly selected from all CBOCs assigned to the respective parent facilities. The C&P, EOC, and EM onsite inspections were only conducted at the randomly selected CBOC (see Table 1).

VISN	Facility	CBOC Name	Location
21	VA Central California HCS	Tulare	Tulare, CA
Table 1. Site Inspected			

**Review Results:** We made recommendations in two review areas.

**Recommendations:** The VISN and Facility Directors, in conjunction with the respective CBOC managers, should take appropriate actions to:

- Ensure that patients with normal cervical cancer screening results are notified of results within the required timeframe and that notification is documented in the EHR.
- Ensure that clinicians document all required tetanus and pneumococcal vaccination administration elements and that compliance is monitored.

#### **Comments**

The VISN and Facility Directors concurred with our recommendations and provided acceptable improvement plans. (See Appendixes A and B, pages 11–13, for the Directors' comments.) We will follow up on the planned actions until they are completed.

JOHN D. DAIGH, JR., M.D. Assistant Inspector General for Healthcare Inspections

# **Objectives and Scope**

#### **Objectives**

- Evaluate whether CBOCs comply with selected VHA requirements regarding the provision of cervical cancer screening, results reporting, and WH liaisons.
- Evaluate whether CBOCs properly provided selected vaccinations to veterans according to Centers for Disease Control and Prevention guidelines and VHA recommendations.
- Determine whether CBOC providers are appropriately credentialed and privileged in accordance with VHA Handbook 1100.19.<sup>1</sup>
- Determine whether CBOCs are in compliance with standards of operations according to VHA policy in the areas of environmental safety and emergency planning.<sup>2</sup>

#### **Scope and Methodology**

#### Scope

We reviewed selected clinical and administrative activities to evaluate compliance with requirements related to patient care quality and the EOC. In performing the reviews, we assessed clinical and administrative records as well as completed onsite inspections at randomly selected sites. Additionally, we interviewed managers and employees. The review covered the following five activities:

- WH
- Vaccinations
- C&P
- EQC
- EM

#### Methodology

To evaluate the quality of care provided to veterans at CBOCs, we conducted EHR reviews for the WH and vaccinations topic areas. For WH, the EHR reviews consisted of a random sample of 50 women veterans (23–64 years of age). For vaccinations, the EHR reviews consisted of random samples of 75 veterans (all ages) and 75 additional veterans (65 and older), unless fewer patients were available, for the tetanus and

<sup>&</sup>lt;sup>1</sup> VHA Handbook 1100.19, Credentialing and Privileging, November 14, 2008.

<sup>&</sup>lt;sup>2</sup> VHA Handbook 1006.1, Planning and Activating Community-Based Outpatient Clinics, May 19, 2004.

pneumococcal reviews, respectively. The study populations consisted of patients from all CBOCs assigned to the parent facility.<sup>3</sup>

The C&P, EOC, and EM onsite inspections were only conducted at the randomly selected CBOC. One CBOC was randomly selected from the 56 sampled parent facilities, with sampling probabilities proportional to the number of CBOCs eligible to be inspected within each of the parent facilities.<sup>4</sup>

In this report, we make recommendations for improvement. Recommendations pertain to issues that are significant enough to be monitored by the OIG until corrective actions are implemented.

We conducted the inspection in accordance with *Quality Standards for Inspection and Evaluation* published by the Council of the Inspectors General on Integrity and Efficiency.

-

<sup>&</sup>lt;sup>3</sup> Includes all CBOCs in operation before October 1, 2011.

<sup>&</sup>lt;sup>4</sup> Includes 96 CBOCs in operation before October 1, 2011, that had 500 or more unique enrollees.

## **CBOC Profiles**

To evaluate the quality of care provided to veterans at CBOCs, we designed reviews with an EHR component to capture data for patients enrolled at all of the CBOCs under the parent facility's oversight. The table below provides information relative to each of the CBOCs under the oversight of the respective parent facility.

VISN	Parent Facility	CBOC Name	Locality <sup>6</sup>	Uniques, FY 2012 <sup>7</sup>	Visits, FY 2012 <sup>7</sup>	CBOC Size <sup>8</sup>
	21 VA Central California HCS	Merced (Merced, CA)	Urban	2,461	11,463	Mid-Size
21		Oakhurst (Oakhurst, CA)	Rural	1,141	7,080	Small
		Tulare (Tulare, CA)	Rural	4,566	17,086	Mid-Size
Table 2. CBOC Profiles						

<sup>&</sup>lt;sup>5</sup> Includes all CBOCs in operation before October 1, 2011.

<sup>6</sup> http://vaww.pssg.med.va.gov/

<sup>&</sup>lt;sup>7</sup> http://vssc.med.va.gov

Based on the number of unique patients seen as defined by VHA Handbook 1160.01, *Uniform Mental Health Services in VA Medical Centers and Clinics*, September 11, 2008, the size of the CBOC facility is categorized as very large (> 10,000), large (5,000-10,000), mid-size (1,500-5,000), or small (< 1,500).

# WH and Vaccination EHR Reviews Results and Recommendations

#### WH

Cervical cancer is the second most common cancer in women worldwide. Each year, approximately 12,000 women in the United States are diagnosed with cervical cancer. The first step of care is screening women for cervical cancer with the Papanicolaou test or "Pap" test. With timely screening, diagnosis, notification, and treatment, the cancer is highly preventable and associated with long survival and good quality of life.

VHA policy outlines specific requirements that must be met by facilities that provide services for women veterans. We reviewed EHRs, meeting minutes and other relevant documents, and interviewed key WH employees. Table 3 shows the areas reviewed for this topic. The review element marked as NC needed improvement. Details regarding the finding follow the table.

NC	Areas Reviewed			
	Cervical cancer screening results were entered into the patient's EHR.			
	The ordering VHA provider or surrogate was notified of results within the defined timeframe.			
X	Patients were notified of results within the defined timeframe.			
	Each CBOC has an appointed WH Liaison.			
	There is evidence that the CBOC has processes in place to			
	ensure that WH care needs are addressed.			
Table 3. WH				

There were 21 patients who received a cervical cancer screening at VA Central California HCS's CBOCs.

<u>Patient Notification of Normal Cervical Cancer Screening Results</u>. VHA requires that normal cervical cancer screening results must be communicated to the patient in terms easily understood by a layperson within 14 days from the date of the pathology report becoming available. We reviewed 21 EHRs of patients who had normal cervical cancer screening results and determined that 10 patients were not notified within the required 14 days from the date the pathology report became available.

<sup>&</sup>lt;sup>9</sup> World Health Organization, *Comprehensive Cervical Cancer Prevention and Control: A Healthier Future for Girls and Women*, Retrieved (4/25/2013): <a href="http://www.who.int/reproductivehealth/topics/cancers/en/index.html">http://www.who.int/reproductivehealth/topics/cancers/en/index.html</a>.

<sup>10</sup> U.S. Cancer Statistics Working Group, United States Cancer Statistics: 1999-2008 Incidence and Mortality Webbased report.

<sup>&</sup>lt;sup>11</sup> VHA Handbook 1330.01, Health Care Services for Women Veterans, May 21, 2010.

#### Recommendation

**1.** We recommended that managers ensure that patients with normal cervical cancer screening results are notified of results within the required timeframe and that notification is documented in the EHR.

#### **Vaccinations**

The VHA NCP was established in 1995. The NCP establishes and monitors the clinical preventive services offered to veterans, which includes the administration of vaccines. The NCP provides best practices guidance on the administration of vaccines for veterans. The Centers for Disease Control and Prevention states that although vaccine-preventable disease levels are at or near record lows, many adults are underimmunized, missing opportunities to protect themselves against tetanus and pneumococcal diseases.

Adults should receive a tetanus vaccine every 10 years. At the age of 65, individuals who have never had a pneumococcal vaccination should receive one. For individuals 65 and older who have received a prior pneumococcal vaccination, one-time revaccination is recommended if they were vaccinated 5 or more years previously and were less than 65 years of age at the time of the first vaccination.

We reviewed documentation of selected vaccine administrations and interviewed key personnel. Table 4 shows the areas reviewed for this topic. The review element marked as NC needed improvement. Details regarding the finding follow the table.

NC	Areas Reviewed	
	Staff screened patients for the tetanus vaccination.	
	Staff administered the tetanus vaccine when indicated.	
	Staff screened patients for the pneumococcal vaccination.	
	Staff administered the pneumococcal vaccine when indicated.	
X	Staff properly documented vaccine administration.	
	Managers developed a prioritization plan for the potential occurrence of vaccine shortages.	
Table 4. Vaccinations		

<u>Documentation of Vaccinations</u>. Federal Law requires that documentation for administered vaccines include specific elements, such as the vaccine manufacturer and lot number of the vaccine used. We reviewed the EHRs of 35 patients who received a tetanus vaccine administration at the parent facility or its associated CBOCs and did not find documentation of all the required information related to tetanus vaccine administration in 4 of the EHRs. We reviewed the EHRs of 44 patients who received a pneumococcal vaccine administration at the parent facility or its associated CBOCs and

<sup>&</sup>lt;sup>12</sup> VHA Handbook 1120.05, Coordination and Development of Clinical Preventive Services, October 13, 2009.

<sup>&</sup>lt;sup>13</sup> VHA Handbook 1006.1.

did not find documentation of all the required information related to pneumococcal vaccine administration in 24 of the EHRs.

#### Recommendation

2. We recommended that managers ensure that clinicians document all required tetanus and pneumococcal vaccine administration elements and that compliance is monitored.

# Onsite Reviews Results and Recommendations

#### **CBOC Characteristics**

We formulated a list of CBOC characteristics that includes identifiers and descriptive information for the randomly selected CBOCs (see Table 5).

	Tulare		
VISN	21		
Parent Facility	VA Central California HCS		
Types of Providers	Nurse Practitioner Primary Care Physician Psychiatrist Psychologist		
Number of MH Uniques, FY 2012	613		
Number of MH Visits, FY 2012	2,466		
MH Services Onsite	Yes		
Specialty Care Services Onsite	WH		
Ancillary Services Provided Onsite	Electrocardiogram Laboratory Onsite Pharmacy		
Tele-Health Services	Dermatology MH MOVE <sup>14</sup> Neurology Retinal Imaging Care Coordination Home Telehealth		
Table 5. Characteristics			

 $<sup>^{14}\</sup> VHA\ Handbook\ 1120.01, \textit{MOVE! Weight Management Program for Veterans}, March\ 31,\ 2011.$ 

#### C&P

We reviewed C&P folders, scopes of practice, meeting minutes, and VetPro information and interviewed senior managers to determine whether facilities had consistent processes to ensure that providers complied with applicable requirements as defined by VHA policy. Table 6 shows the areas reviewed for this topic.

NC	Areas Reviewed			
	Each provider's license was unrestricted.			
New Provider				
	Efforts were made to obtain verification of clinical privileges			
	currently or most recently held at other institutions.			
	FPPE was initiated.			
	Timeframe for the FPPE was clearly documented.			
	The FPPE outlined the criteria monitored.			
	The FPPE was implemented on first clinical start day.			
	The FPPE results were reported to the medical staff's Executive Committee.			
	Additional New Privilege			
	Prior to the start of a new privilege, criteria for the FPPE were developed.			
	There was evidence that the provider was educated about FPPE prior to its initiation.			
	FPPE results were reported to the medical staff's Executive Committee.			
	FPPE for Performance			
	The FPPE included criteria developed for evaluation of the practitioners when issues affecting the provision of safe, high-quality care were identified.			
	A timeframe for the FPPE was clearly documented.			
	There was evidence that the provider was educated about FPPE prior to its initiation.			
	FPPE results were reported to the medical staff's Executive Committee.			
	Privileges and Scopes of Practice			
	The Service Chief, Credentialing Board, and/or medical staff's Executive Committee list documents reviewed and the rationale for conclusions reached for granting licensed independent practitioner privileges.			
	Privileges granted to providers were setting, service, and provider specific.			

<sup>&</sup>lt;sup>15</sup> VHA Handbook 1100.19.

NC	Areas Reviewed (continued)		
	The determination to continue current privileges was based in part		
	on results of Ongoing Professional Practice Evaluation activities.		
Table 6. C&P			

The CBOC was compliant with the review areas; therefore, we made no recommendations.

## **EOC and Emergency Management**

#### **EOC**

To evaluate the EOC, we inspected patient care areas for cleanliness, safety, infection control, and general maintenance. We reviewed relevant documents and interviewed key employees and managers. Table 7 shows the areas reviewed for this topic.

NC	Areas Reviewed
	The CBOC was Americans with Disabilities Act-compliant, including:
	parking, ramps, door widths, door hardware, restrooms, and
	counters.
	The CBOC was well maintained (e.g., ceiling tiles clean and in good
	repair, walls without holes, etc.).
	The CBOC was clean (walls, floors, and equipment are clean).
	Material safety data sheets were readily available to staff.
	The patient care area was safe.
	Access to fire alarms and fire extinguishers was unobstructed.
	Fire extinguishers were visually inspected monthly.
	Exit signs were visible from any direction.
	There was evidence of fire drills occurring at least annually.
	Fire extinguishers were easily identifiable.
	There was evidence of an annual fire and safety inspection.
	There was an alarm system or panic button installed in high-risk
	areas as identified by the vulnerability risk assessment.
	The CBOC had a process to identify expired medications.
	Medications were secured from unauthorized access.
	Privacy was maintained.
	Patients' personally identifiable information was secured and protected.
	Laboratory specimens were transported securely to prevent
	unauthorized access.
	Staff used two patient identifiers for blood drawing procedures.
	Information Technology security rules were adhered to.
	There was alcohol hand wash or a soap dispenser and sink available
	in each examination room.
	Sharps containers were less than 3/4 full.

NC	Areas Reviewed (continued)		
	Safety needle devices were available for staff use (e.g., lancets, injection needles, phlebotomy needles).		
	The CBOC was included in facility-wide EOC activities.		
Table 7. EOC			

The CBOC was compliant with the review areas; therefore, we made no recommendations.

#### **Emergency Management**

VHA policy requires each CBOC to have a local policy or standard operating procedure defining how medical and MH emergencies are handled. <sup>16</sup> Table 8 shows the areas reviewed for this topic.

NC	Areas Reviewed		
	There was a local medical emergency management plan for this CBOC.		
	The staff articulated the procedural steps of the medical emergency		
	plan.		
	The CBOC had an automated external defibrillator onsite for cardiac		
	emergencies.		
	There was a local MH emergency management plan for this CBOC.		
	The staff articulated the procedural steps of the MH emergency		
	plan.		
	Table 8. Emergency Management		

The CBOC was compliant with the review areas; therefore, we made no recommendations.

<sup>&</sup>lt;sup>16</sup> VHA Handbook 1006.1.

#### **VISN 21 Director Comments**

Department of Veterans Affairs

Memorandum

Date: August 8, 2013

From: Director, VISN 21 (10N21)

Subject: CBOC Reviews at VA Central California HCS

**To:** Director, 54LA Healthcare Inspections Division (54LA)

Acting Director, Management Review Service (VHA 10AR

MRS OIG CAP CBOC)

- 1. Thank you for the opportunity for the staff at VA Central California Health Care System to review their draft OIG CBOC report.
- 2. Attached is the action plan developed by the facility for the two findings that were cited.
- 3. If you have any questions, please contact Terry Sanders Associate Quality Manager for VISN 21 at (707) 562-8370.

Sheila Cullen

#### **VA Central California HCS Director Comments**

Department of Veterans Affairs

Memorandum

**Date:** August 5, 2013

From: Director, VA Central California HCS (570/00)

Subject: CBOC Reviews at VA Central California HCS

**To:** Director, VISN 21 (10N21)

- 1. I appreciate the opportunity to provide our input to the Community Based Outpatient Clinic (CBOC) reviews of our health care system which took place during the week of June 17, 2013.
- 2. I concur with all the findings and suggested improvement actions.
- 3. On behalf of our health care system, I would like to express my thanks to the OIG-CBOC team which reviewed our Community Based Outpatient Clinics. We found the team members not only fair in their assessments, but very helpful throughout our preparatory activities and during the review itself.
- 4. We appreciate the important feedback we received from this review and will use the information to further strengthen our administrative and clinical operations.

Sincerely,

Jbanne M. Krumberger

Director

#### **Comments to OIG's Report**

The following Director's comments are submitted in response to the recommendations in the OIG report:

#### **OIG Recommendations**

**1.** We recommended that managers ensure that patients with normal cervical cancer screening results are notified of results within the required timeframe and that notification is documented in the EHR.

Concur

Target date for completion: September 30, 2013

Facility's Response:

A performance improvement plan has been put into place to meet the 14-day notification requirement for normal cervical cancer screening results. The action items initiated by Women's Health Department and the Laboratory Service include entering and monitoring all relevant patient notification information in a secure drive log, multidisciplinary review (including vendor) and staff training of screening lab process, extending specimen pick up hours by vendor, and processing results upon availability instead of holding and batching.

To ensure compliance with 14-day patient notification of normal results, a monthly audit is being conducted for three consecutive months from July through September 2013 with a target goal of a minimum of 90% compliance each month. Managers will conduct periodic evaluation of audits and processes.

2. We recommended that managers ensure that clinicians document all required tetanus and pneumococcal vaccination administration elements and that compliance is monitored.

Concur

Target date for completion: September 30, 2013

Facility's Response:

Changes have been made to our CPRS (electronic record) charting template. Clinical reminders were modified so that the Vaccine Information Statement (VIS) edition, lot number, and manufacturer are mandatory fields when documenting administration of these vaccines.
